SUMMARY

Full stack engineer with 4.5+ years across fintech, automotive and SaaS products. Day to day that means React and Next.js on the front, Node.js and FastAPI behind it, and Redis, PostgreSQL and queue-based services underneath. Over the past year the work has shifted toward LLM and agent systems: Claude and OpenAI integrations, tooling built on Model Context Protocol, and a live multi-tenant trading SaaS built solo alongside a working trader. Also contracts with Handshake AI on RLHF and model evaluation for frontier AI labs.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, SQL

AI & LLM: Claude API, OpenAI API, Model Context Protocol (MCP), RAG Pipelines, Agentic & Multi-Agent Workflows, Function/Tool Calling, Prompt Engineering, LLM Evaluation, RLHF, AI-Assisted Development (Claude Code, Cursor)

Frontend: React.js, Next.js (SSR/ISR/SSG), Redux, Zustand, React Query, React Hooks, Context API, Tailwind CSS, Framer Motion, GSAP

Backend: Node.js, Express.js, FastAPI, RESTful APIs, GraphQL, WebSockets/Socket.io, Microservices, Event-Driven Architecture, Server-Side Rendering

Data: PostgreSQL, MySQL, MongoDB, Redis (Caching & Redis Streams), Data Modeling, Query Optimization

DevOps & Tools: Docker, GitHub Actions, CI/CD, Vercel, Git, Postman, Structured Logging & Observability, Agile/Scrum

WORK EXPERIENCE

Independent Full Stack & AI Engineer

Remote

Freelance Engineering Practice – Multiple Clients & Contracts

NOV 2025 – Present

- Deliver features for clients across React, Next.js, Node.js, FastAPI and Docker, owning each engagement from architecture through deployment and production support.
- Wired Claude and OpenAI APIs into client products for content generation and workflow automation, cutting out steps the team was doing by hand every week.
- Contract AI Trainer with **Handshake AI** since July 2026, doing RLHF and model evaluation for frontier AI labs: pairwise preference ranking, rubric-based scoring, reasoning-chain authoring and adversarial prompt testing. 20+ tasks delivered so far, every one approved, holding a 4.1 quality rating.
- Client work has covered admin dashboards, frontend defect fixes and debugging GitHub Actions CI/CD pipelines, run in parallel with the Handshake projects.

Phoenix Advance Software Pvt. Ltd.

Jaipur

Full Stack Developer

SEP 2022 – NOV 2025

- Owned full-stack delivery for automotive, fintech and marketing SaaS products, building modular React/Next.js frontends against Node.js services and cutting page load times by 35%.
- Led API-first integration work connecting Razorpay, Stripe, WhatsApp Business and CRM ecosystems, which automated manual operational workflows and shortened processing cycles.
- Architected microservices with Redis caching, queue-based messaging and structured observability, sustaining 10K+ daily requests at 99.8% uptime.
- Ran sprint planning, backlog prioritization and incident playbooks. Recognized internally as “Robust Backend Developer” for backend resiliency work across flagship products.

Airsonweb Solutions Pvt. Ltd.

Ahmedabad

React Developer

DEC 2021 – MAY 2022

- Built reusable React.js and React Native component libraries that lifted Lighthouse mobile scores from 72 to 95, and hardened REST integrations with schema validation and retry logic to reduce production API errors.

PROJECTS

QuantDeskMT5 – Multi-Tenant Algorithmic Trading SaaS • [Live](#)

Personal Project • Tech Stack: FastAPI, Python, Redis Streams, TimescaleDB, Next.js 15, Dramatiq, Stripe, Docker, MetaTrader 5

- Sole engineer on a live multi-tenant trading SaaS built with a working forex trader, turning his strategy rules into an automated system. Each user connects their own MetaTrader 5 account through a dedicated bridge process, with every query, config and backtest scoped to that user.
- Ticks move from the broker through Redis Streams into the trading engine and out over WebSocket to the browser, holding tick-to-signal under 100ms across 43 symbols. Live trading and backtesting share the same engine and only swap the execution adapter, with 13 strategies behind a registry and backtests offloaded to Dramatiq workers.
- Every order clears 8 risk gates, including kill switch, daily loss cap, max drawdown and an HMM regime classifier, then moves through an order state machine while positions reconcile against the broker every 5 seconds. Stripe tiers, JWT with RBAC, AES-256-GCM encrypted broker credentials, 100+ tests and Locust load testing.

V3Cars – Automotive Content & Listings Platform • [Live](#)

Lead Developer • Tech Stack: PHP, MySQL, jQuery, JavaScript, HTML, Bootstrap, Third-Party APIs

- Led development across the site, owning frontend and backend modules as well as the internal admin dashboard the editorial team uses to publish cars, specs and articles.
- Rebuilt the content pipeline around automated data ingestion, modular CMS tooling and SEO-ready components, which roughly halved the time to publish new listings and grew mobile traffic 32%.
- Tuned the PHP/MySQL backend with rewritten queries, connection pooling and CDN caching so seasonal traffic spikes stopped dragging response times, and handled client-reported issues through to fix.

TrackOfferz – Campaign Management Platform • [Live](#)

Tech Stack: Next.js, Node.js, Express.js, MySQL, Redis, Tailwind CSS, RESTful APIs, Microservices

- Real-time campaign orchestration on Redis-backed queues with feature-flagged microservices and observability dashboards, processing 10K+ events/day.
- Shipped an RBAC-secured analytics workbench with live KPI views and scheduled exports, which removed most of the manual reporting the team was doing.

CarNDrive – Automotive Platform • [Live](#)

Tech Stack: Next.js, JavaScript, Tailwind CSS, PHP, MySQL, REST APIs

- Multi-region platform for India and UAE with country-based listings, car comparison, fuel pricing and used-car modules, covering 1K+ cars across brands, models and variants.
- Built a custom PHP-MySQL CMS and lead API workflows for dynamic content and inquiries, which made onboarding a new region much faster.

TimesMoney – Fintech Aggregator • [Live](#)

Tech Stack: Next.js, Tailwind CSS, Node.js, MongoDB, RESTful APIs, Server-Side Rendering

- SSR-first fintech marketplace with automated schema markup, performance budgets and accessibility gates, taking the SEO score from 78 to 96. Admin surfaces run on MongoDB with PCI-aligned payment flows.

CERTIFICATIONS

Claude Code in Action – Anthropic

Frontend Developer (React) – HackerRank

EDUCATION

Aryan College, Ajmer

Bachelor's Degree in Computer Applications

Ajmer

JUN 2017 – DEC 2020
